Sonic Drilling Launches Dedicated Geothermal Website

January 05, 2010 – Sonic Drilling Ltd. and the Sonic Drill Corporation have launched a dedicated geothermal website to provide specific information for contractors, drilling companies, project managers and consumers. The site offers the following features:

- Easy to understand information on geo-energy choices.
- Geothermal project case histories (updated on a regular basis).
- Explanation of how a geo-exchange system works.
- List of benefits that geothermal energy offers.
- Profile of Sonic Drilling Ltd.'s two geothermal partners.
- Information on tax credits and incentives for geothermal installations.
- Articles specific to geothermal drilling.
- Rolling slideshow of drilling photos.

The new website, www.sonicgeothermal.com, also fills a void that currently exists in helping consumers understand how geothermal energy can better their homes and lives.

GET THE SONIC GEOTHERMAL ADVANTAGE

Geothermal energy is quickly becoming a mainstream choice with consumers and developers as a cheap, sustainable alternative energy source that is friendly to the environment.

When it comes to geothermal installations, sonic drilling technology provides the fastest and easiest method possible. Using patented drilling technology developed by the Sonic Drill Corporation and used by Sonic Drilling Ltd., geothermal holes are drilled 3-5 times faster with 70% less on-site mess. The sonic drill is also able to bore, case, loop and grout in one step, making for quick and easy geo-loop installation.

WHAT IS GEO-ENERGY?

Just below the frost line, the earth has a constant, even temperature. Geothermal systems use this natural energy to heat homes and commercial buildings in the cold months and to cool them during warm weather.
